

Zero waste - Building system

Zero waste - Building system

Award winning building system

Although **moladi** building system is primarily a manufacturer of a re-useable machine made formwork system that allows walls to be cast stronger faster for less, the principal focus is on the delivery of the "whole house". A house consists of many components and the "assembly process" needs to be project managed in its entirety. That means windows, doors, roof, bath, toilet, paint, ceiling, glass, electrical hardware, etc. etc. needs to be planned ordered and supplied in order to avoid a "bottle neck" that would stop production creating "waste" resulting in an increase in cost. This in turn makes the product, the home, unaffordable to the majority of people.
